

What is claimed is:

1. A wiper blade mounted on a wiper arm which is oscillatingly provided on a car body for wiping a window glass surface by being pressed on the window glass surface by the
5 wiper arm and being reciprocally oscillated, the wiper blade comprising:

a blade rubber for wiping the window glass surface; and
a holder piece assembly including a plurality of holder pieces for holding the blade rubber and an elastic member for
10 connecting the holder pieces in the longitudinal direction.

2. The wiper blade according to claim 1, wherein when the blade rubber is apart from the window glass surface, radius of curvature of the holder piece assembly curved by the elastic
15 member is smaller than the radius of curvature of the window glass surface.

3. The wiper blade according to claim 1, wherein the holder pieces are integrally molded with the elastic member.

20

4. The wiper blade according to claim 1, wherein the wiper blade comprises a plurality of elastic members that connect the holder pieces therebetween.

25 5. The wiper blade according to claim 4, wherein the wiper blade further comprises an auxiliary member for positioning the plurality of elastic members in the longitudinal direction to connect the elastic members.

6. The wiper blade according to claim 1, wherein the holder pieces are formed to be gradually tapered toward the adjacent another holder piece.

5

7. The wiper blade according to claim 1, wherein the holder piece is provided with a holding claw for holding the blade rubber.
